

Many global companies find it difficult to quickly and effectively investigate workplace incidents and to consistently get to the real 'root causes' of incidents in order to make effective recommendations and produce consistent reporting.

Kelvin TOP-SET provides courses in incident investigation and accident prevention, as well as conducting investigations on the behalf of clients. The TOP-SET investigation system is a comprehensive and straightforward method that enables an investigator, whether experienced or not, to get to the heart of an incident and identify where remedial action should be taken. It also promotes awareness of the conditions in which incidents occur, which helps companies to take preventative measures before they happen.

TOP-SET is used throughout the world in the oil, chemical, pharmaceutical, plastics, mining, transport, marine, aerospace, explosives, nuclear and civil engineering industries.

We look forward to welcoming you to stand G21 if this is of interest to you and hope you enjoy the show!

Business description

Kelvin TOP-SET is used in over 40 countries worldwide to quickly and effectively get to the root causes of all levels of industrial incidents in order to prevent recurrence, to improve safety performance and to increase overall profitability.

With partner companies in Canada, USA, Brazil, Norway and in Australia Kelvin TOP-SET is well equipped to deal with all industries incident investigation requirements.

Demonstrations of the Kelvin TOP-SET incident investigation system and of the world leading incident investigation and reporting software will be regularly held on the stand. Incident investigation professionals will be on hand to discuss any challenges specific to your industry and to provide free incident investigation advice where required.
